

## Improving the quality of your composite parts with a homogeneous mix of resin and fillers

**Mixing station for resin and fillers**  
Simple, efficient, secured, and economic

### Benefits

**This system makes it possible to have a homogenous mix with different filler contents**

- Possibility of directly using material supplier drums
- Possibility of setting different filler contents in the control cabinet
- The cover of the 200L drum supports a mixer, the supply for resin and fillers, a measuring container for coloring paste, accelerator, inhibitor, and a check window
- The mixer and the hopper are fixed on lifts
- Homogenous mix thanks to the filler rainfall of fillers into the resin
- The rotation of the lift makes it possible to place the hopper on top of the 200L drum
- The lifts facilitate operator handlings
- The shuttle trolleys allow for the supply of filled resin in different working stations
- Possibility of installing containers for additives onto drum cover as well
